

Front Line Glass Entrance Systems

Front Line™ glass entrance systems, by Coral Architectural Products, are designed to add elegance to buildings across the nation. While beautiful to look at, these systems are functional and provide many years of trusted performance in interior and exterior applications.

Top and bottom center pivots allow easy door to frame alignment during and after installation. The glass panels are held in place by extruded aluminum fittings. This ensures that the fittings maintain their shape and secure the glass in the glazing pocket. 1/2", 3/8" and 3/4" glass panels are available to meet your project's requirements.
