

SOLUTIONS FOR YOUR
CHALLENGES IN
GLASS MAINTENANCE

Clarvista™ Glass

by PPG

Clarvista™ Glass by PPG

Clarvista™ Glass by PPG is an innovative glass for shower enclosures that, with regular maintenance, looks newer, longer than standard clear glass.

Clarvista™ glass is produced with a proven and reliable manufacturing method that seals the glass surface so that it is more resistant to the corrosive action of moisture, humidity and the chemicals found in many household cleaners.

CLEANING & MAINTENANCE

As one of the industry's most durable shower glasses, Clarvista™ features a protective coating that combats the corrosive effects of moisture, humidity and many chemicals. To maintain the clarity and enhance the service life of Clarvista™ glass, homeowners should follow these basic cleaning and maintenance guidelines:

- Glass should be cleaned regularly, with frequency of cleaning determined by usage (minimum weekly).
- Always use a mild soap or glass-cleaning solution.
- Use a clean, lint-free cloth to remove soap, dirt and other shower residue.
- Some soap, shower products and cleaning products contain abrasives. Avoid vigorous wiping of the glass when these products are on the glass to prevent scratches and other damage.
- Once soil and residue is removed, thoroughly rinse all cleaning solutions and other debris from the glass.
- Rinse and dry all cleaning solutions from shower heads, faucets, door handles, frames, guides, hinges, fasteners and any rubber or plastic sealants.

Tip: Regular use of a microfiber cloth or squeegee is an easy way to clean glass completely.

As with any glass:

- Do not use scrapers or razor blades to remove stubborn deposits or labels.
- Do not use abrasive cleaners such as Ajax or Comet powder.
- Do not allow splashed materials such as dirt or oil to dry on the glass surface.

APPROVED CLEANERS:

- Baking Soda (sodium bicarbonate)
- Clean Shower® (Church & Dwight)
- Clorox® Bathroom Cleaner (The Clorox Company)
